FOREWORD

The Milk Recording Services of the Animal Industry Branch take pride again in publishing the 1985 Annual Summary for herds on Milk Recording.

In comparing 1984 production data to the 1985 production data it's encouraging to note the increase in kg milk per cow, for the four types of Milk Recording Services available in the province.

The ROP program showed an increase of 274 kg per cow for milk, a 3 kg increase for butterfat. The percent B.F. showed a slight decrease of -.11% from 3.68% to 3.57% B.F.

The ROP program experienced a change in testing procedures, as of Apri 1, 1985 whereby all samples were sent to a central laboratory for milk composition analysis, versus having the samples tested on the farm by the Babcock method in 1984.

A decline of 10 herds is reported at year end for the ROP program, fro 127 herds in 1984 to 117 in 1985.

The Official DHIA program continued to gain some popularity with an increase of nine new herds on the program from 64 to 73 herds at year end.

This program showed an increase in milk production of 227 kg per cow, and a 6 kg per cow increase for butterfat. All herds on this program receive the minimum rotational tests by another supervisor as specified by the C.M.R.B. rules.

The Regular DHIA program continued to experience a freeze on the expansion of this program due to budgetary restrictions. The resulting net loss of seven herds from 217 to 210 herds was due to the transfer of regular DHIA herds to the Official DHIA program. These two programs combined consisted of 283 herds on test at year end.

The Government Grant to the various DHI Associations remained at $2.00 per cow per year and 65 cents per herd-mile in 1985. The DHIA Grant structur for 1986, will be $1.00 per cow and 75 cents a herd-mile. With this change the DHIA program will be able to accommodate an extra 17 herds on the program and we anticipate that, the DHIA program will consist of approximately 80 Official DHIA herds and 220 Regular DHIA herds for a total of 300 herds. Twelve herds discontinued on the DHIA program in 1985, and a total of 14 new herds were enrolled.

The Owner Sampler program had a net decrease of 1 herd on the program from 113 herds in 1984 to 112 herds at year end in 1985. Nineteen new herds were enrolled on the program and 20 discontinued of which eight transferred t the DHIA program. The average production increased by 109 kg per cow on the O/S program.

All four Milk Recording programs showed an increase of 6 BCA points fo milk.

With the new national computer program in effect in April, 1986, there ill be a slight change in the reporting procedure for 1986. The four rograms will be distinctly reported separately as ROP - Official DHIA - egular DHIA - and Owner Sampler, instead of listing the official DHIA herds ith the Regular DHIA herds.

The staff of the Milk Recording services, is greatly thankful to the ollowing people who have assisted in compiling this report.

Herman Bouw - for compiling the ROP report
Pam Howe - for typing the ROP report
Kim Ominski - for compiling the provincial data
Emerson Trout - for verifying the information
Wendy Davidson - for typing the provincial section.

Last but not least gratitude and thanks are due to the ROP inspectors nd the DHIA supervisors. These people are the nucleus of the Milk Recording rogram, and without their work and co-operation, this report would not be ossible.

Marcel Fraser
Provincial DHIA Fieldman

FOREWORD

This year proved to be another successful year for all Manitoba milk recording programs as depicted by the significant increases in average production per cow in 1985 over 1984. Congratulations are extended to participating dairy producers, field supervisors and support staff, and dairy extension personnel for their continuous cooperative efforts in achieving these new heights.

Our mandate for 1986 is to successfully implement a new ROP-DHI milk recording computer program. Manitoba DHI herds will convert to this new program in April, 1986 while ROP herds are scheduled for the conversion sometime during September or October, 1986. The intent of this new program is to provide both an improvement and an expansion of milk recording services to producer members. It will also create more uniformity in available services among Manitoba milk recording programs.

To achieve our mandate, plans are being made to conduct a province-wide series of small-scale workshops this fall. These workshops will be open to producers currently enrolled on a milk recording program, to those who are interested in enrolling, and to field supervisors and dairy extension personnel. The objective of these workshops is to create a strong working knowledge of the information contained in the new reports and how it can be effectively used to improve herd productivity and profitability. An overview of the benefits of existing and soon to be available options will also be highlighted. In addition to these workshops, a number of revised and new dairy factsheets will be released throughout 1986. Each will deal with specific herd management areas that can be improved through better management and utilization of milk recording information.

Serious discussions concerning the initiation of a comprehensive provincial mastitis control program in association with the introduction of an individual cow somatic cell count program are currently underway. The benefits of utilizing monthly individual cow somatic cell count information in the elimination and control of mastitis are well documented. A specific somatic cell counting package exists as part of our new milk recording computer program. This excellent herd management tool will be available to producers sometime in the future as an option to the basic milk recording service. It will be made available on a user-pay basis.

New enrollments will continue to be restricted through 1986 until such time when an acceptable and workable solution is adopted allowing all Manitoba producers an equal opportunity to take advantage of the ever expanding number of services offered through milk recording.

A strong desire and willingness to learn and to effectively utilize new and existing technologies will be a major key to the future succcess of today's dairy operations. I encourage and challenge all producers to actively participate in milk recording, regional dairy seminars, dairy tours, producer workshops and breed club activities. Let's make 1986 a year to remember.

All the best throughout 1986.

T.E. Droppo
Provincial Dairy Specialist

1985

PROCEDURES AND RULES FOR OFFICIAL DHIA

PROCEDURES:

1. Complete N.I.P. formsets for all grade cows.

2. After receiving processed N.I.P. cards from JDBC, complete an applicati for official DHIA and return this to the Milk Recording office.

3. When the supervisor completes the first special information sheet your herd will be on official DHIA.

RULES:

1. All cows in the herd must be positively identified by registration pape or processed N.I.P. card.

2. Co-operate with D.H.I.A. Supervisor in testing milk weighing devices pri to the evening milking on test day.

3. Sign the computer barn sheet verifying that production and status dates are correct.

4. Put up Supervisor for the night (if requested) on rotational tests (2 times per year.

RECOMMENDATION:

At this time there is still some room for expansion in the Official DHIA program. We stongly recommend to all regular DHIA members, to positively identify their grade animals by the N.I.P. identification program.
